

Introducing TabletWorks CADriver

GTCO CalComp by Turning Technologies is the industry leader in computer input peripherals. Our good fortunes stem from the creation of products and services designed with your needs in mind. Clients asked and we delivered.

Meet TabletWorks CADriver. Designed and manufactured by our team in Arizona, software is compatible with GTCO CalComp by Turning Technologies' small and large-format DrawingBoard, Super L and Roll-Up digitizer solutions and features full Wintab functionality to support AutoCad users. View projects with a fresh perspective and further enhance your digitizer experience to develop pinpoint and dynamic drawings. Our digitizer solutions provide the platform to turn visions into reality with exceptional quality and performance. Integrate with today's leading estimating software to create precise calculations that can easily be read, analyzed and revised in real-time for systemic takeoffs.

Priced at \$95* for a two year subscription, TabletWorks CADriver provides quality and performance to take drawings to the next level. We strive for an excellent customer experience by making it convenient to purchase driver and hardware solutions all in one spot. Our dedicated team offer direct, comprehensive knowledge on product features and functionality.
